

The Bitcoin Coloring Book

21 Pages of Fun for the Next Generation of Builders

"Color the Money You Can't Print"

By Conor Chepenik
Dad & Bitcoiner

A Message From This Book's Creator ❤️

This book started as blank pages and a simple idea: children learn best by doing.

Every mark your child makes here teaches them something powerful - that they can create value through their own actions. That's what this book is really about.

To the child: Make this yours! Every color you choose matters. You're learning that you have the power to build and create.

To the parent: Color alongside them. Use each page as a chance to talk about earning, saving, and why some money holds its value better than others. Watch how these simple concepts click into place through play.

To anyone discovering this later: Perfect timing. These ideas about value and money never get old - they just become more relevant.

We live in a world where money is broken, where governments print trillions out of thin air, robbing the future to patch up the present. That's neither fair nor freedom. Rather than hope our children figure it out later, we can give them a head start now. Through crayons and conversation, they'll learn principles that will serve them for life.

This book, and Bitcoin, are gentle acts of revolution. Peaceful ones. Powerful ones. They represent a belief in a future where value is earned, not taken. Where children grow up understanding what sound money really means.

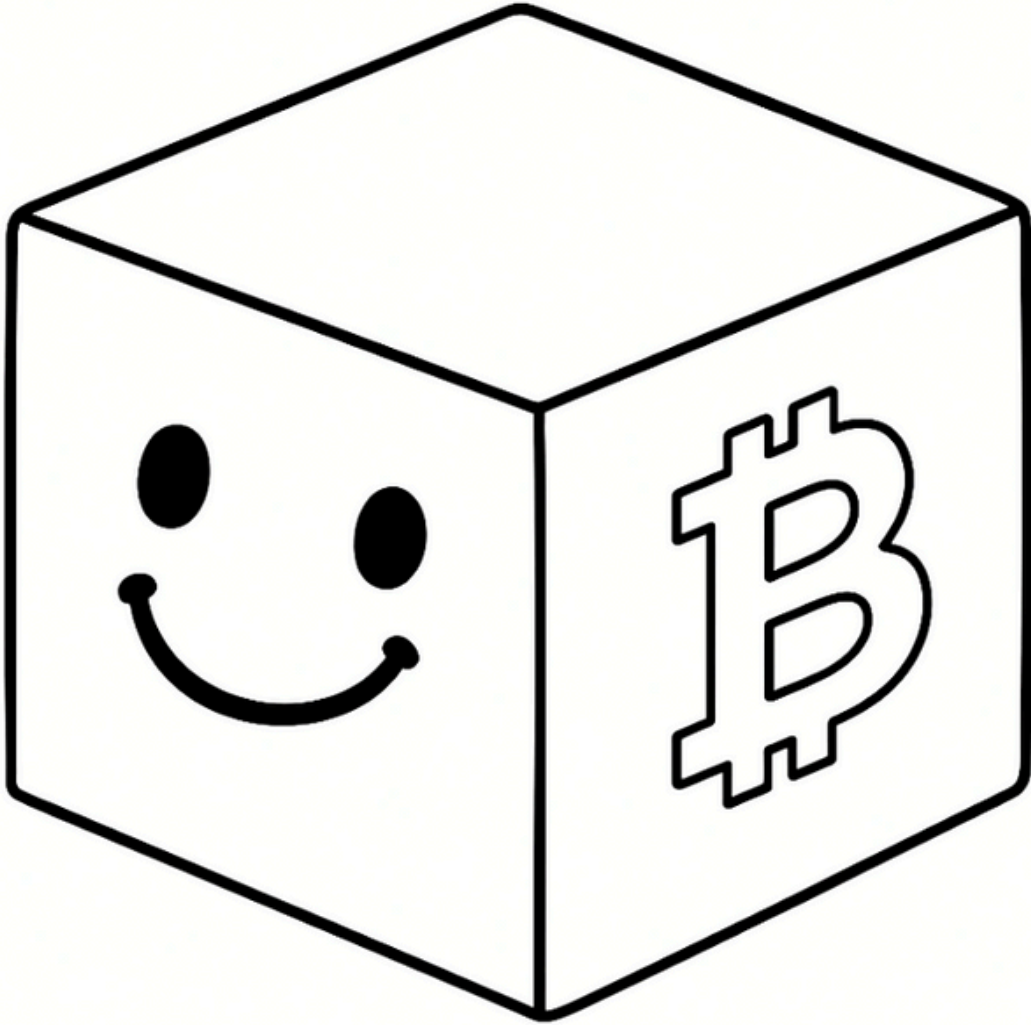

So grab a crayon. Plant a seed. Build something that lasts.

Glossary

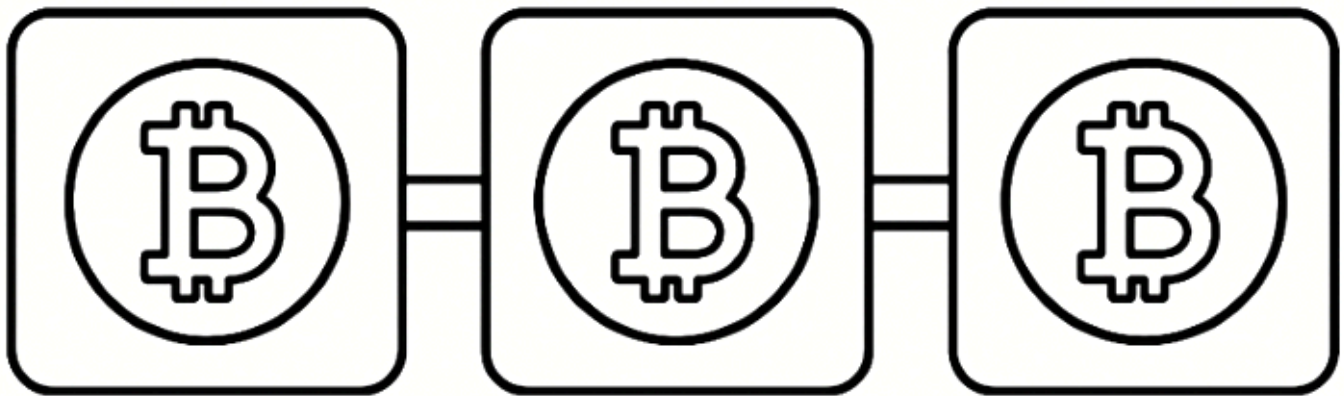

- 
1. **Block**
 2. **Blockchain**

 15. **Hodl**
 16. **Freedom**
 17. **Rocket**
 18. **Satoshi**
 19. **Orangepill**
 20. **Signal**
 21. **Begin**

BLOCK

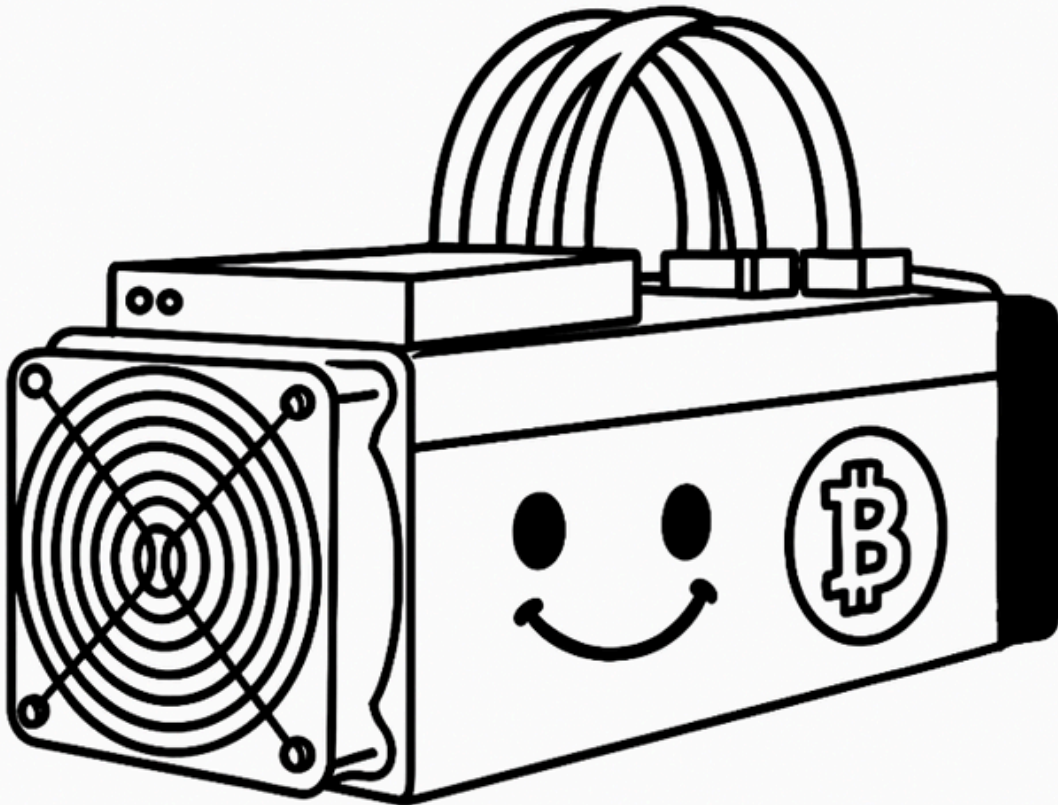

Blocks get added to Bitcoin's blockchain every ten minutes and hold new transactions.

BLOCKCHAIN

When blocks of transactions connect together one after another, they make a long chain called a *blockchain*!

MINING

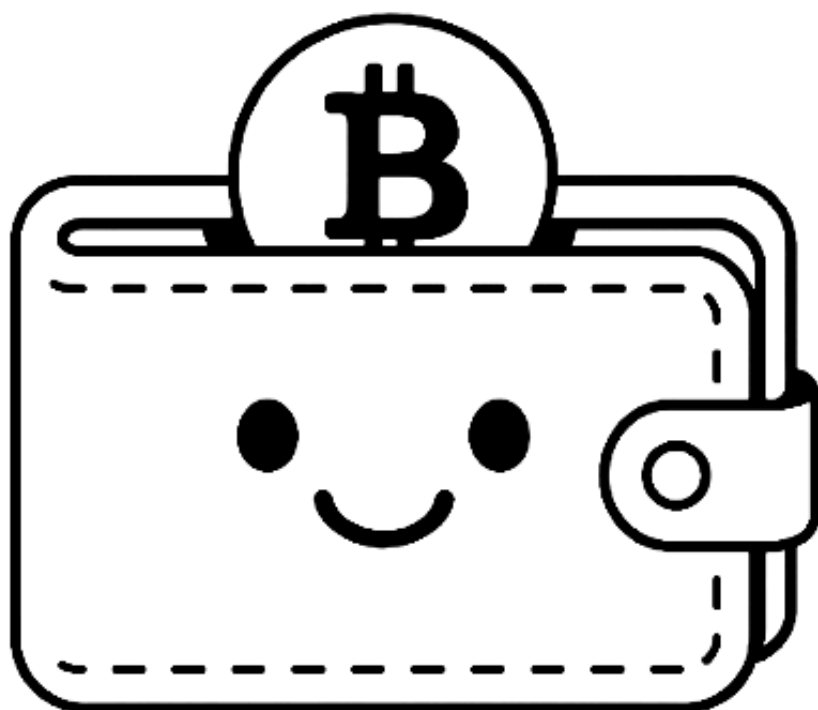

Bitcoin *mining* uses powerful computers to solve puzzles and the winner adds the block and earns bitcoin!

HASH

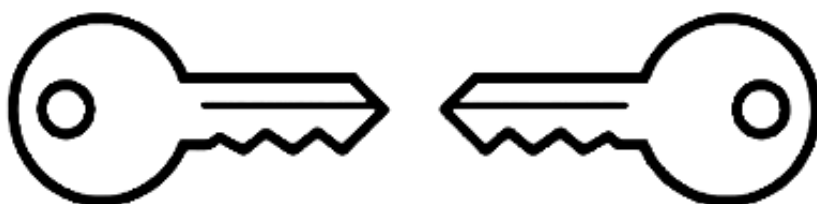

Every block needs a special mark,
a fingerprint that's quite unique!
Miners work to find the *hash*, a code
that makes each block complete.

WALLET

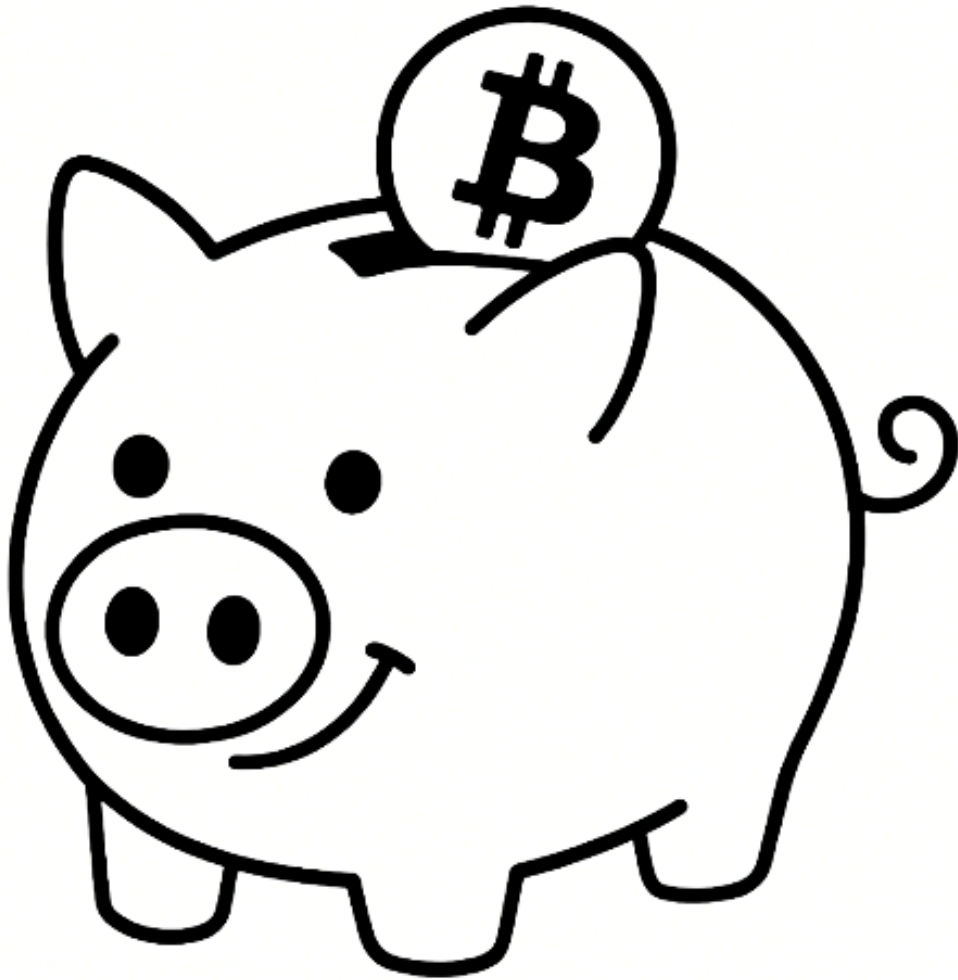

A *wallet* holds your secret key,
so only you can spend your ₿.
One key is public — you can share.
The other's private — guard with care!

PUBLIC

PRIVATE

SAVE

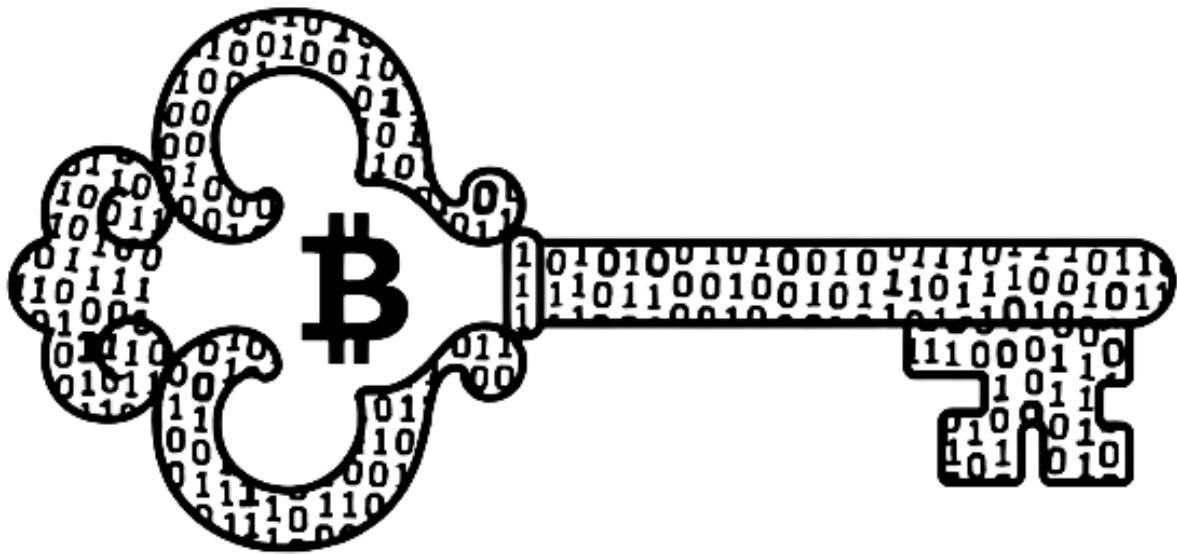

Smart *savers* pick the best
money around because
Bitcoin is strong, scarce,
and sound!

SECURE

Bitcoin stays safe when your
private keys are *secure*.
It's how to make sure your
money is yours!

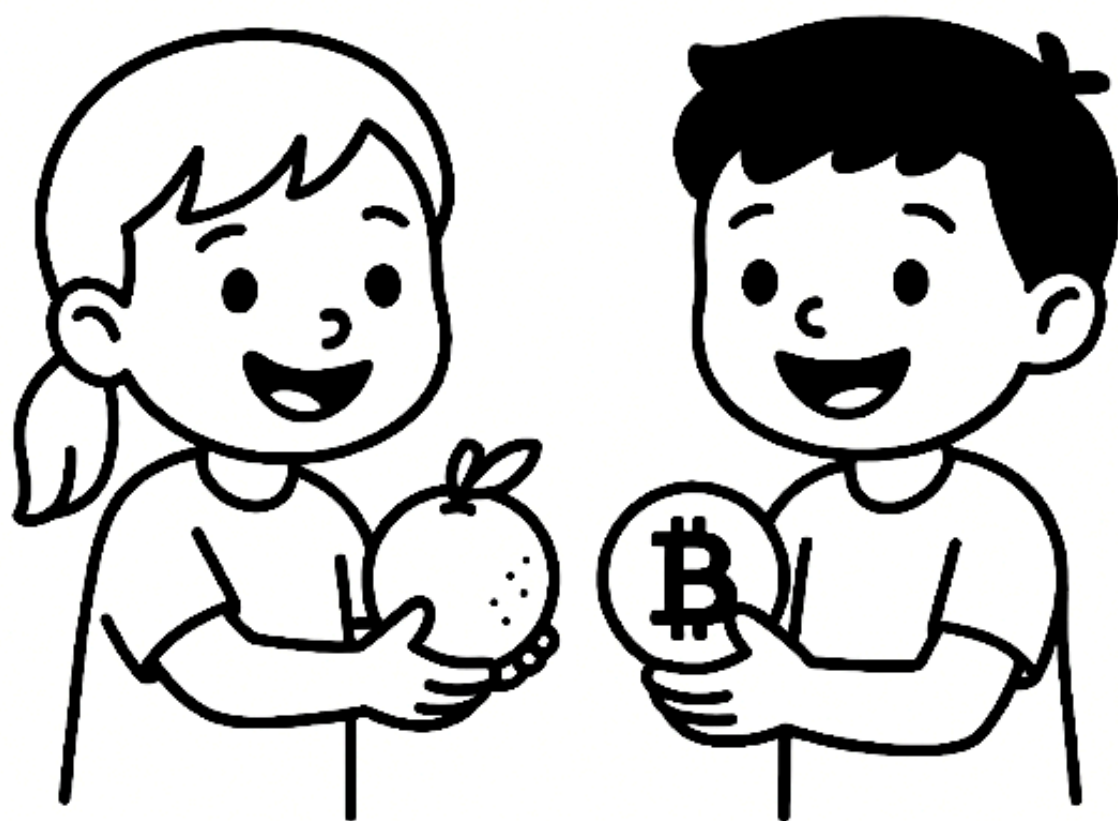

KEY

Your public *key* tells friends
where to send so it's safe to
share, again and again.

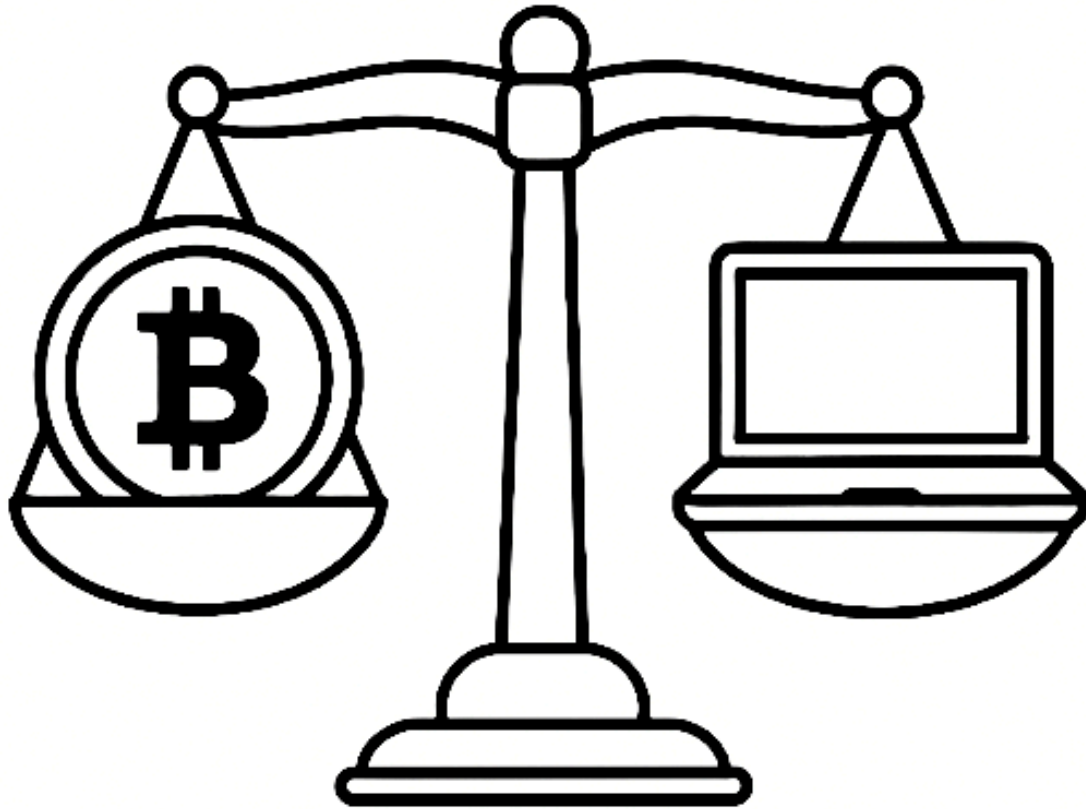

But your private *key*? That's
just for you protect it well or
you'll lose your bitcoin...boo!

TRADE

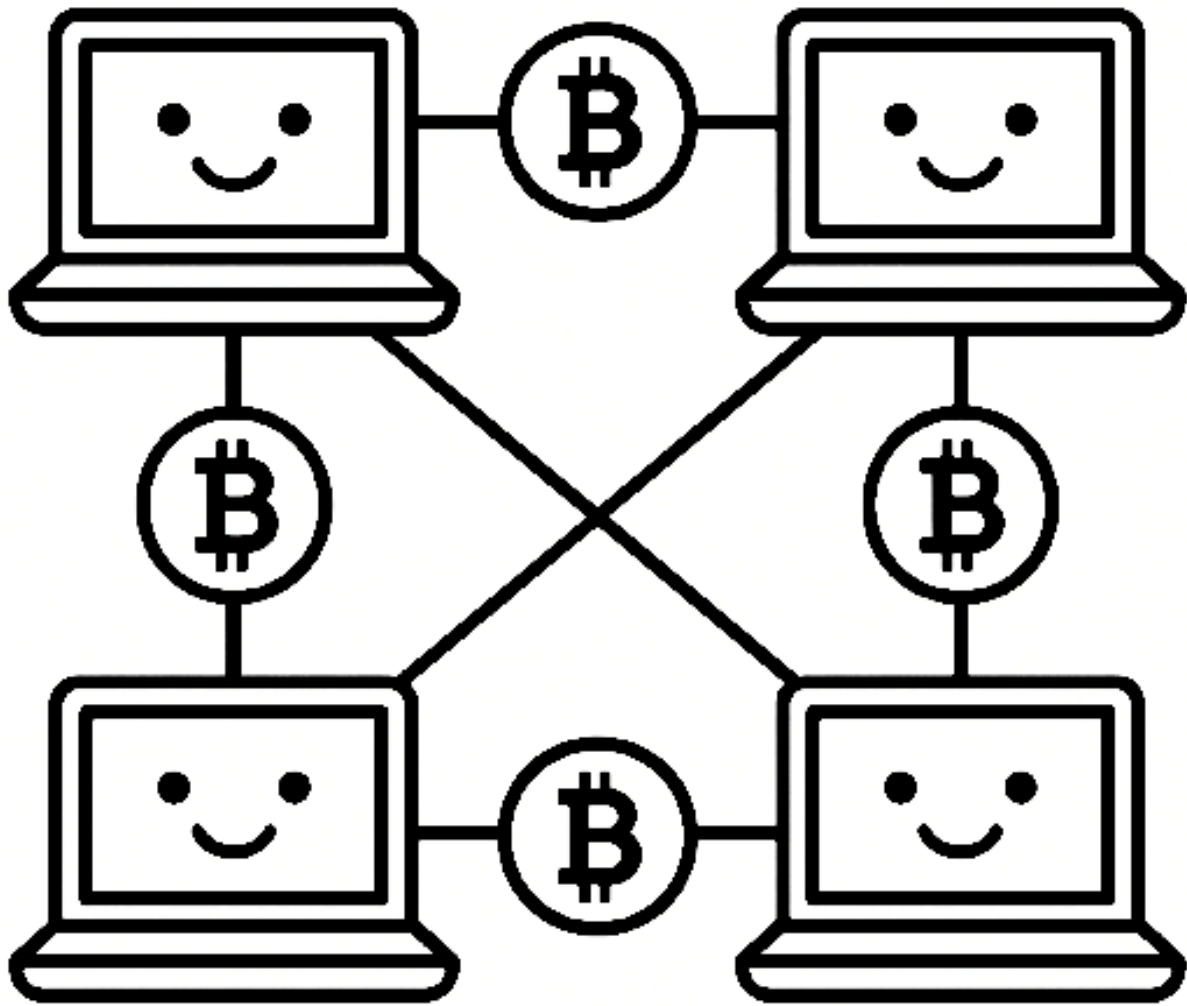

You don't want what I can give,
but there's still a way we both can live!
Bitcoin helps us *trade* with care,
even when our wants don't pair.

VALUE

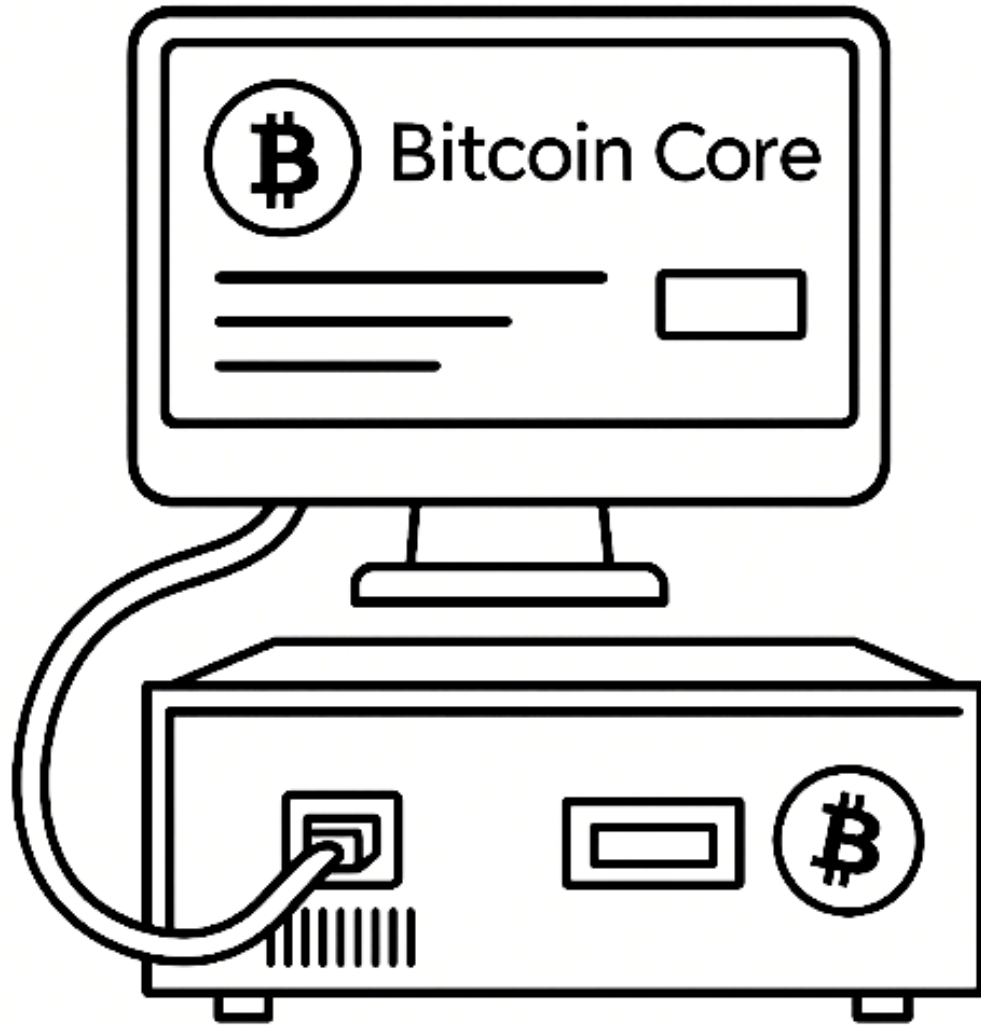

If *value* can vanish with every new note,
how can we save up for shoes or a coat?
Bitcoin's not magic, it's math you can trust.
A money that's honest, transparent, and just.

NETWORK

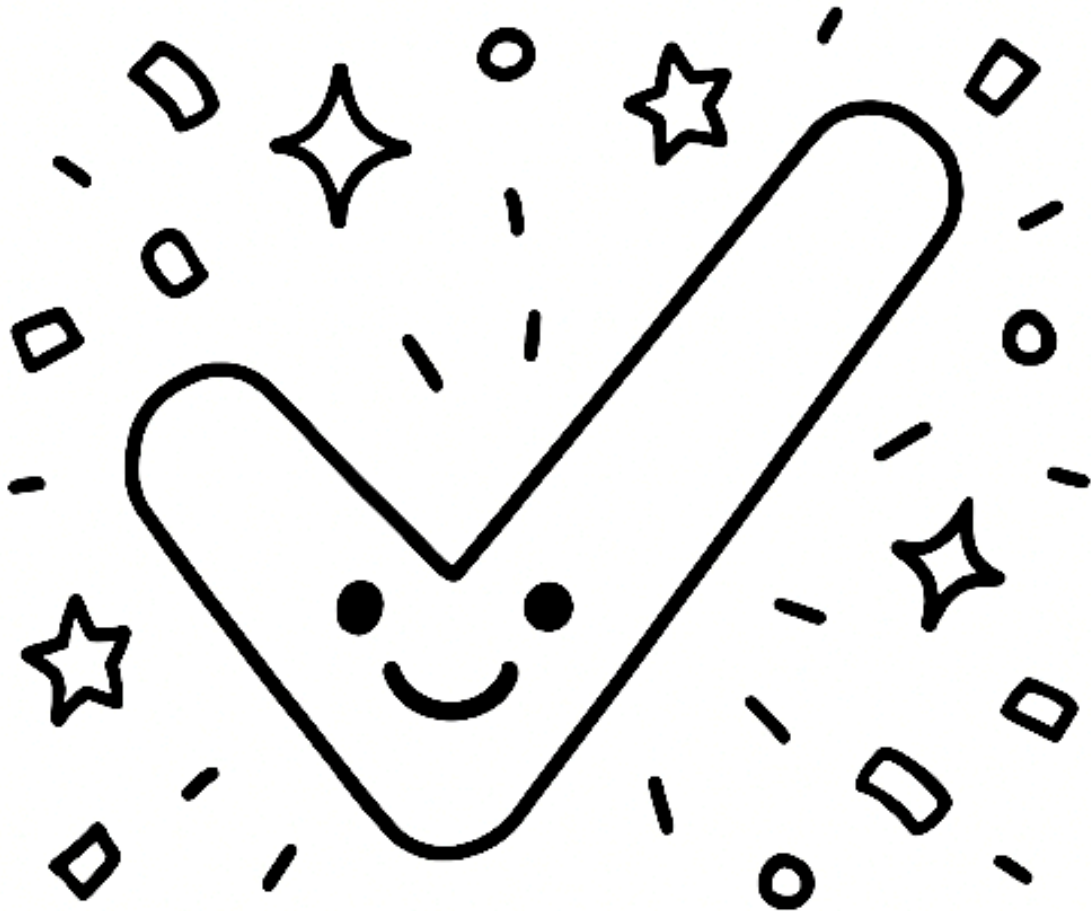

This *network* is made of friends who share.
They check each block with love and care!
No cheating here, it's fair and true.
It's amazing what the Bitcoin *network* can do!

NODE

Each *node* checks if coins are real by following protocols instead of making deals!
It stops all cheats and keeps things right,
a simple guard both day and night.

VERIFY

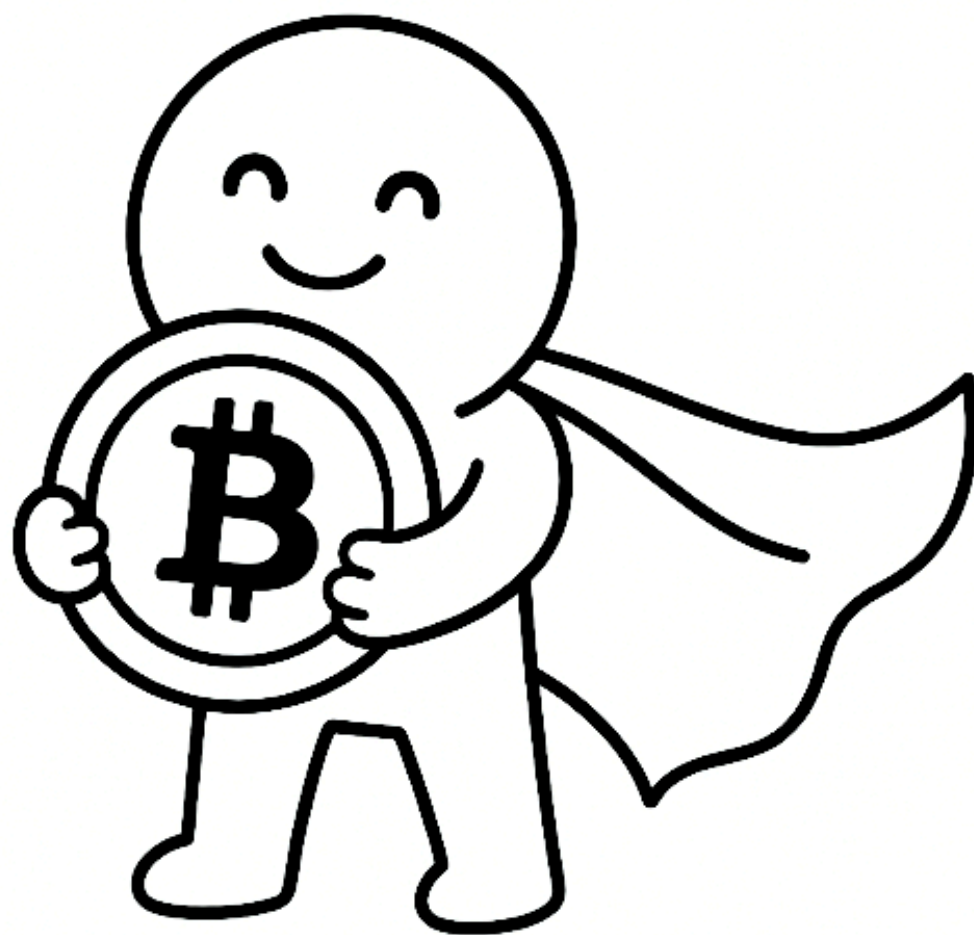

Don't trust a suit or a slick disguise.
Just run the code and check for lies!
The rules are clear, no need to pry.
Just read the chain and *verify*!

GLOBAL

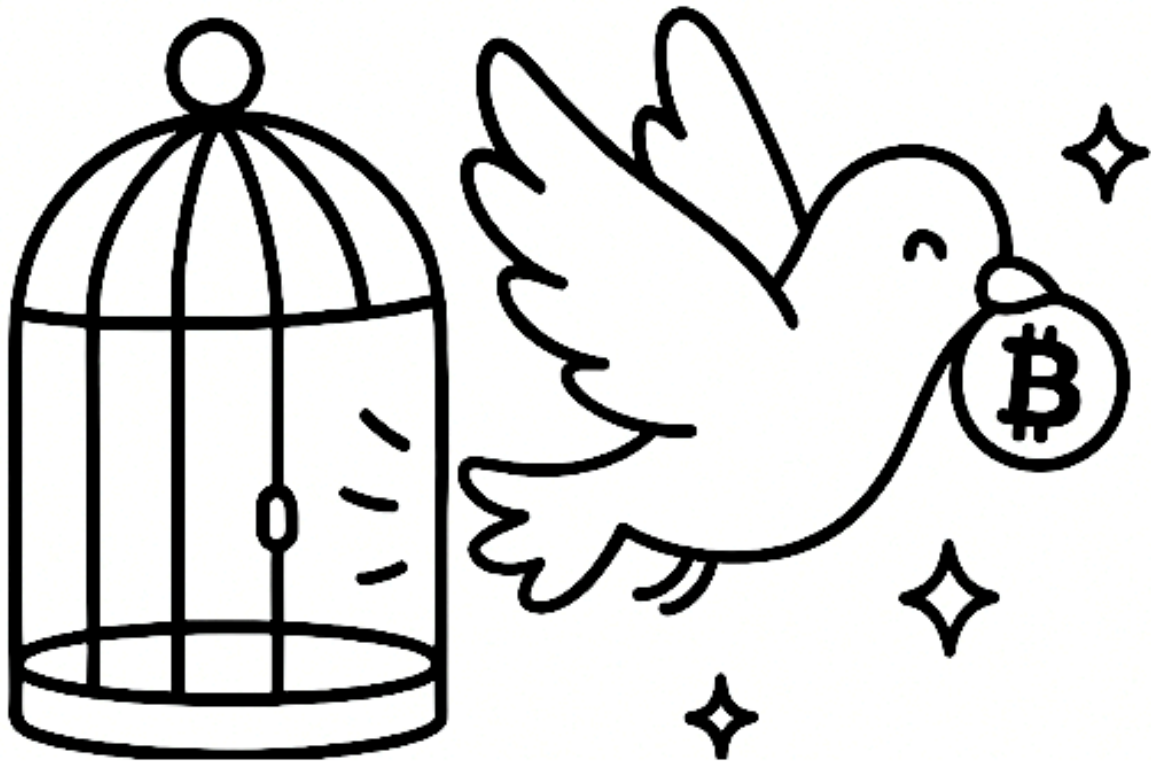

No borders block it, no banks decide.
Just peer-to-peer money on every side!
From jungle towns to urban lights,
global Bitcoin protects your rights!

HODL

Don't chase the noise or sell in fright.
Just stack your sats and *hodl* them tight!
With patience sharp and hands of stone,
you will be rewarded as Bitcoin takes the
money throne.

FREEDOM

Most money's rules were made by kings.
They spy and seize and pull your strings.
Bitcoin breaks that ancient scheme,
so nation-states can't stop you from
living your *freedom* dream.

ROCKET

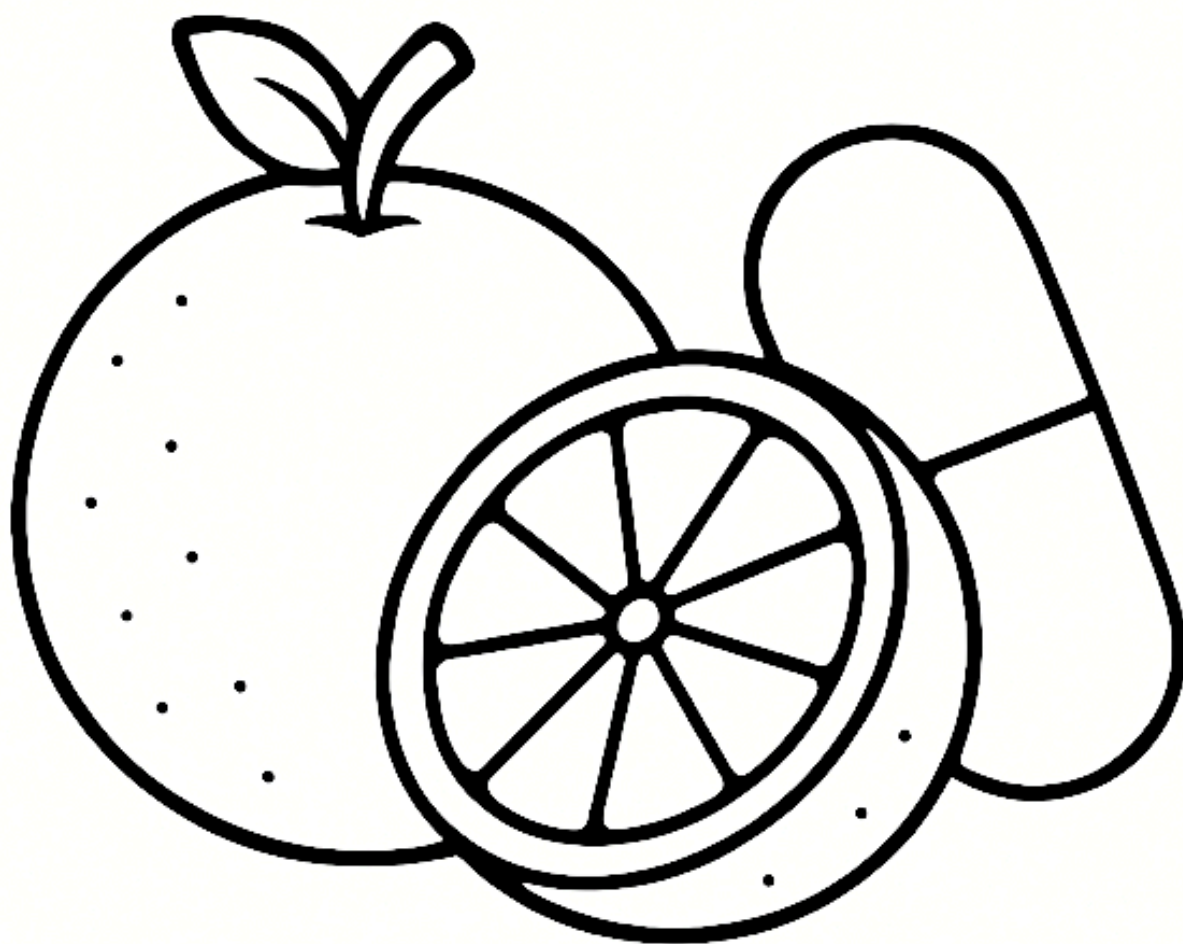

While dollars sink and bonds decay,
this *rocket* climbs a brighter way.
Green candles glow against the tide.
Bitcoin's *rocket* ascends while others slide.

SATOSHI

He built the chain then walked away.
No throne to hold, no king to stay.
He gave the gift and said goodbye,
so Bitcoin's rules could never die.
Thank you, *Satoshi*, for showing the way!

ORANGEPILL

It starts with just a little spark,
a squeeze of truth inside the dark.
You take the *orangepill* and then you see:
the money's fake, but you are free!

SIGNAL

The world is loud with empty talk,
but truth still travels block by block.
Just tune your mind and stay aligned.
The *signal* frees the sovereign mind.

BEGIN

The chain is strong, the page is new.
The spark is lit inside of you.
You've seen the map, you know the way.
Now take a step, *begin* today!

You Made It to the End: That's Proof of Work 🚀

Every page you colored was a block you mined.

If you're here, you already understand Bitcoin better than most adults. Not because you memorized the words, but because you did the work.

You took empty spaces and made them yours. You made choices. You stuck with it when it got boring. You came back when you felt like quitting.

That's sort of how Bitcoin works.

The computer that solves the puzzle doesn't understand monetary theory. It just does the work, block by block, until a new block of transactions emerges on the blockchain.

You're a human node now. Running curiosity software. And guess what? There's no final update. You're version **infinity** ∞

This book will get bent. It'll live under your bed. One day you'll find it in a box and think: "Oh yeah... here is where I put my esoteric Bitcoin coloring book."

That moment? That's the seed sprouting again.

To the kid: You're going to build something incredible. The world needs what you're thinking.

To the parent: You just orange-pilled someone who can't even drive yet. Legend status achieved.

To anyone else who somehow ended up here: Welcome to the rabbit hole. Population - everyone who's ever colored outside the lines.

Now close this book. Turn off the screens. Go outside and touch grass.

Then come back and show someone else how to color their own path to freedom.

Signal transmitted. Node activated. Stack sats, stay humble!

Every parent wants to give their children the tools to build a better future.

I made this book for my kids and for any child curious about the world. Bitcoin is freedom money. It teaches children the timeless values of saving, mathematical thinking, fairness, and the true value of effort and patience. I believe kids deserve to grow up in a world where money is built on principles, not permission.

These 21 coloring pages are simple, fun, and designed to introduce core ideas from the Bitcoin world, from blocks & wallets to freedom & the moon. As a builder, a Dad, and a Bitcoiner, I created these pages because I spend my days helping others leverage Bitcoin, and doing my best to raise a family rooted in love, liberty, and learning.

@ConorChepenik

Coloring is learning.

Sound money for sound minds.

STAY HUMBLE; STACK SATS

better money
